

Cobb-Douglas 関数

$$Y = \mathcal{F}(K, L)$$

$$\mathcal{F}(K, L) = F^0 \times \left(\frac{K}{K^0}\right)^\alpha \left(\frac{L}{L^0}\right)^{1-\alpha}$$

$$\frac{\partial \mathcal{F}}{\partial K} > 0, \frac{\partial \mathcal{F}}{\partial L} > 0$$

Solow-Swan モデル [Solow; Swan 1956]

$$Y_t = \mathcal{F}(K_t, L_t)$$

$$I_t = sY_t$$

$$K_{t+1} = K_t + \underbrace{I_t}_{\Delta K_t}$$

Romer モデル [Romer 1996]

$$L_t = L_t^{PD} + L_t^{RD}$$

$$Y_t = \mathcal{F}(K_t, A_t L_t^{PD})$$

$$A_{t+1} = A_t + \underbrace{\gamma L_t^{RD} A_t^\phi}_{\Delta A_t}$$
